## **App Idea for Prototype**

FemmeTrip is a mobile application designed to help female travellers connect with females with similar interests to join them on their journeys. Other than simply matching travel companions the app will ensure trust by adding additional security features like providing users with the ability to review compatibility indicators and assess trust and safety signals. The app will also give users the ability to plan destinations based on memory artifacts shared by other users.

### **Novelty**

While most of the existing travel apps focus only on bookings and itineraries, FemmeTrip focusses mainly on connecting similar minded travel partners and building trust even between unknown female travellers. Even though there are women only travel apps like Turlina, they only stop at account verification. But FemmeTrip goes much deeper into trust by providing features like compatibility scoring, trust signals like ratings, reviews.

### **Transformative experience for the user**

Compared to men women are more concerned about safety in travelling alone and even with someone unknown. FemmeTrip addresses this common problem among females by allowing users to choose trusted travel companions using safety signals, verification and compatibility scores.

Instead of just only having chats with matched companions and planning manually, the app itself will provide the ability to host and coordinate trips.

FemmeTrip not only finds a travel buddy, but also it will help to start long term friendships with likely minded travelers.

# Background Research

1. Safety concerns are widespread among female travelers
  - In a 2024 survey, ~70% of solo female travelers reported worrying about their safety while traveling alone, up from 64% in 2023.
  - Those who have done fewer solo trips tend to worry more: ~78% of women with fewer than 6 solo trips feel unsafe vs ~59% among those with more experience.
2. Other major barriers beyond safety
  - Higher costs of traveling solo are a significant issue because there's nobody to share expenses with (transport, accommodation).
  - Feelings of loneliness, getting lost, or language barriers also figure prominently.
  - A good chunk of women who haven't tried solo travel yet cite fear of something bad happening as a reason.
3. Women-only or safety-focused travel is growing
  - There's increasing interest among women in "women-only" travel options. For example, ~65% of female travelers in a survey said they would be more likely to book a solo trip if there were women-only tours.
  - Digital tools/community networks are also playing a bigger role; people share safety tips, advice, and experiences to reduce anxiety.
4. Gaps & opportunities
  - Despite many apps and tools, there's still a lack of product solutions that combine trust / verification + companionship + safety + ease of planning in one place.
  - Women often report lack of reliable, verified information about compatibility/trust when choosing travel companions.
  - Offline safety features or low-connectivity support are under-addressed in many travel apps despite the reality of traveling in remote areas.

# PACT Framework

- People:
  - o Primary Users: Women travellers (18-60+), students, working professionals, travel planners.
- Activities:
  - o **Searching for and evaluating companions:** Users engage in the process of identifying potential female travel partners by browsing profiles, reviewing compatibility indicators, and assessing trust and safety signals.
  - o **Planning and organizing trips:** Users can initiate or participate in the creation of trip plans by defining destinations, dates, and preferences, and by joining existing travel groups organized by other women.
  - o **Coordinating trip details:** The application facilitates secure communication channels through which users can discuss itineraries, clarify expectations, and coordinate logistics to ensure a smooth travel experience.
  - o **Sharing experiences:** Users have the opportunity to document their journeys by posting photos, reflections, and other memory artifacts. These contributions foster a sense of community and provide inspiration for future travelers.
  - o **Building trust and relationships:** Through repeated successful collaborations on trips, users cultivate mutual trust and may establish long-term friendships, thereby enhancing both engagement with the platform and the overall sense of safety within the community.
  - o Block the travellers: If the traveller is misbehaving or creating a nuisance then one can block the travellers.
- Context:
  - o Physical context:
    - ♣ Used at home during trip planning, and on the move (airports, hostels, buses, etc.).
    - ♣ Often in low-connectivity or offline environments.
    - ♣ Limited device resources (battery, small screens, older phones).
  - o Social context:
    - ♣ Women-only community focused on safety and trust.
    - ♣ Privacy-sensitive use (control over photos, names, and location visibility).
    - ♣ Cultural differences around women traveling with strangers.
    - ♣ Moderators/admins involved in verification and safety enforcement.
  - o Organisational Context:
    - ♣ Coordination and safety activities often happen on the move, sometimes under time pressure (e.g., transport changes, emergencies).
    - ♣ Sharing memories and reviews happens after trips, usually in relaxed settings.
    - ♣ App provides onboarding tutorials and guidance for new users.
    - ♣ Safety instructions (how to use SOS, live location) are built into the interface.
    - ♣ Knowledge resources (FAQs, travel tips) help users gain new skills and confidence in using the platform.

- Technologies:
  - o **Input:**
    - ♣ Touchscreen input for navigation and data entry.
    - ♣ Camera input for ID/selfie verification and photo uploads.
    - ♣ GPS sensor for live location sharing.
  - o **Output:**
    - ♣ Visual output on mobile screens (text, photos, maps, notifications).
    - ♣ Push notifications for trip updates, reminders, and safety alerts.
  - o **Communications (between people and devices):**
    - ♣ In-app messaging and group chat between users.
    - ♣ Communication with external services (e.g., map APIs).
    - ♣ Speed and reliability depend on mobile internet or Wi-Fi; offline caching supports low-network contexts.
  - o **Size of screen:**
    - ♣ Designed for smartphones (small to medium screen sizes, typically 5–7 inches).
  - o **Graphical User Interface (GUI):**
    - ♣ GUI with intuitive icons, cards, and maps.
    - ♣ Accessible design (large tap targets, contrast, scalable text).
  - o **Multimodal:**
    - ♣ Primarily touch + visual.
  - o **Networked or stand-alone:**
    - ♣ Fully networked system, dependent on internet connectivity.
    - ♣ Offline mode supported for trip details, cached chats, and maps in low-connectivity areas.
  - o **Always on or dial in:**
    - ♣ “Always on” connectivity model with background updates and push notifications.
    - ♣ SOS and safety features require real-time connectivity.
  - o **Type of system:**
    - ♣ Mobile application (Android & iOS) for personal use.
    - ♣ Portable, “carry-anywhere” system — not kiosk or desktop.

# Value Proposition

**Brief Description:**

*A secure and empowering travel platform where women can connect with verified companions, plan safe adventures, and build lifelong friendships through shared travel experiences.*

**Function Factor :**

A trusted digital platform that enables women to find safe, like-minded female travel companions, plan trips together, and share authentic travel experiences.

**Target Audience:**

Designed specifically for women who love to travel but prioritize safety, trust, and companionship.

**Feel Factor :**

Users can confidently explore new destinations with verified companions, enjoy meaningful friendships, and create lasting travel memories—all within a supportive, women-only community.

**Diferentiation :**

Unlike generic travel or social networking apps, this platform integrates **verified identity checks, match-based companion suggestions (80–100% compatibility), and friendship streaks** that reward consistent, safe, and successful trips—fostering both trust and engagement.

# Requirements Gathering

## **Purpose for Requirements Gathering User Study**

- Identify the particular age group of users who love travelling most.
- Identify travel frequencies
- Identify the preferred style to travel (Individual, In Groups)
- Identify reasons most females like to travel (relaxation, exploration, adventure)
- Identify preferred travel destination types (Hiking sites, Religious Places, Natural Resources)
- Identify safety concerns of females when travelling with unknown people
- Identify communication preferences (Messaging, Voice Calls, Video Calls)
- Determine current methods females plan trips
- Health Issues

## **Choice of User Study and User Sample**

We conducted a survey among female travellers who are keen in travelling. We shared a form among friends in order to collect their preferences in a travel guiding app.

## **Data Visualization and Analysis**

The survey was conducted among 10 females mainly to understand their travel preferences and safety concerns when travelling with travel partners.

## Age Group of Respondents

What is your age group?

10 responses

Most of the participants (80%) were within the age group of 18 to 30 years, suggesting that young women are the ones who are most active in travelling and potential users of FemmeTrip.

## Occupation Status

What is your occupation status?

10 responses

The highest percentage of the survey participants were students which is 60% while 40% of the participants were either part time or full time employed. This depicts that future FemmeTrip users might be having a busy life, and we need to cater the features of the app to support trip planning even within busy schedules.

## Travel Frequency

How often do you travel ?

10 responses

Many females seem to be travelling not much often. Hence, it's really essential to make the travel experience meaningful so that it becomes a lifetime memory for them.

## Preferred travel experience

What type of travel experience do you prefer most?

10 responses

Many seems to be travelling for relaxation and explore places which shows that the app should encourage such places in a high capacity.

## Safety Concerns

When travelling with new or unknown people, how concerned are you about your personal safety?

10 responses

What are your main safety concerns when travelling with strangers?

10 responses

Almost all the users are very concerned about safety when travelling with strangers. Therefore, the app should enable features to guarantee safety of participants.

## Preferred mode of communication

Which communication method do you prefer when interacting with travel partners?

10 responses

Many potential FemmeTrip users seem to be comfortable mostly communicating with travel partners via video calls which shows that having the feature to have video calls will make the users feel the app more convenient.

## Insights from the Result

- There are two main age groups of travellers: **18–30** and **30–50**.
- In terms of occupation, most users identified as **students**, with a noticeable portion working **full-time**.
- Users generally travel **a few times a year**, though some travel **once a year**.
- The majority prefer to **travel with family**, while a smaller group prefers **friends of the same age**.
- Most travellers choose to travel for **exploration**, while others travel for **relaxation**.
- **Beaches** are the most popular destinations among travellers.
- Many travellers are **very or extremely concerned** about **personal safety** and **visiting unknown places**.
- The main concerns when travelling alone include **theft or loss of belongings** and **health or medical emergencies**.
- To build **trust before a trip**, most travellers prefer to **meet in person**.
- When planning trips, travellers look for **destination photos**, **travel guides**, and **cost estimates**.
- The most common challenges faced by travellers include **different budgets**, **schedule conflicts**, and **meeting strangers during trips**.

# Requirements Generation

## Persona 1

*Cathy*

- 65
  - Need walking support
  - Limited experience with smartphones and apps
  - Loves visiting religious places
1. She has developed an interest in visiting religious places as she is staying alone at home after her retirement.
  2. She likes to find travel companions who can accompany her and help her as she is having difficulties in walking.
  3. She is confident in using voice calls rather than messaging or having video calls as she is not much familiar with using smart phones.
  4. She is very concern about her safety when travelling with unknown people. She doubts whether sharing her personal information is a risk.
  5. When planning trips, she relies on recommendations and photos from others.

## Persona 2

*Andrea*

- 25 years old
  - Travels very often
  - Hiker
- 
- Andrea is an energetic young traveller whose hobby is hiking
  - She goes on hikes very often and loves to make new friends.
  - Interested on travelling in groups of same age group who are adventurous and fun, as she loves having fun on her way.
  - She likes exploring nature mostly mountainous places.
  - As she is having a very busy lifestyle, she finds messaging more convenient than having calls to communicate.
  - Prefer getting ideas on the places before visiting via photos. Therefore, she likes features like photo sharing.

## Persona 3: Mona

- 33 years old
- Ambitious, thoughtful, and independent woman
- Recently lost her job and sees travel as a way to refresh her mind and rebuild confidence
- Enjoys solo trips where she can slow down, reflect, and connect with locals
- Prefers cultural and scenic destinations — places with history, art, and local experiences
- Often feels lonely traveling alone and wishes she had someone with similar interests to share moments with
- Struggles to find trustworthy companions who value meaningful experiences over partying
- Values emotional connection and shared curiosity when choosing a travel partner
- Looks for companions who are reliable, kind, and respectful of personal space
- Cares a lot about safety and wants reassurance before meeting anyone new
- Enjoys well-planned itineraries but is open to spontaneous adventures
- Uses social media and travel forums to read stories from other solo women travelers
- Believes that finding the right travel companion could make her trips more enjoyable and less isolating

## Persona 4: Kenzie

- 20 years old
- Free-spirited, energetic, and outgoing traveler
- Loves exploring popular cities, local cafés, and nightlife scenes
- Enjoys solo travel but sometimes wishes for company to share fun, spontaneous adventures
- Prefers companions who are flexible, social, and open to trying new things
- Often organizes group trips but finds it hard to coordinate with friends due to different schedules
- Dreams of finding like-minded female travelers to explore new places together
- Likes making quick connections — she's friendly and talkative, easily bonds with people
- Prioritizes trust, vibe, and shared interests over age or background
- Enjoys using chat and video calls to connect before deciding to travel with someone
- Has been scammed once while booking stays, so now seeks platforms that ensure verified and safe profiles
- Sees FemmeTrip as a fun way to find safe, genuine travel matches for short or long trips
- Loves documenting trips and might use FemmeTrip connections to build her travel influencer journey
- Feels empowered when meeting other women who travel fearlessly

## Requirements Generation

1. Login & Registration: Users can securely register and log in to the app.
2. 2FA: for user's security
3. Profile Setup: Users can create profiles manually or via voice assistance.
4. Safety Verification: Users upload a face photo to verify gender and get a safety badge.
5. Travel Personality Quiz: Collects user travel preferences and interests.
6. Voice Assistance: Guides users through navigation and actions using voice commands.
7. Matching Algorithm: Matches users with like-minded women travellers.
8. Trip Create/Edit/Delete: Create solo or group trips, add itineraries, budget, etc.
9. Communication feature: In-app messaging (Direct message or a group chat), Video or voice calling.
10. Community Feature: Travel stories & blogs, photo memories gallery, Influencer mode to build travel content (Can integrated with Instagram /TikTok)
11. Trip review, ratings and feedback: This feature useful for after the trip, user can rate the destination, companion and app feedback to improve the app features.
12. Report/Block User: Lets users report or block others for safety reasons.
13. Admin Dashboard: Admin monitors user activity, reports, and subscription data.

## Synthesis of Requirements Gathering and Generation

| Function/Requirement                              | Feature                                                                                                                                             | Priority |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| Users can securely register and log in to the app | User can create an account by providing email, FirstName and Last Name. Once the account is created the user can login with her credentials.        | High     |
|                                                   | Users can renew password if forgotten                                                                                                               | High     |
| 2FA: for user's security                          | The app verifies the user by sending a verification code to the user's email address                                                                | High     |
| Profile Set up                                    | Users can create their profile by filling a form                                                                                                    | High     |
|                                                   | Users can create their profile with the help of voice assistance                                                                                    | Low      |
| Safety Verification                               | Users can upload their photo to verify gender and get a verified badge on their profile                                                             | Medium   |
| Travel Personality Quiz                           | Users can take a quiz where the app collects user preferences regarding travelling                                                                  | High     |
| Matching Algorithm                                | The app runs an algorithm in order to match users with others who have similar interests. This will help them to find their travel partners easily. | High     |
|                                                   | The user can see the similarity percentage on the profiles of other users.                                                                          |          |
| Planning Trips                                    | Users can create either solo or group trips.                                                                                                        | High     |
|                                                   | Users can view their past trips, upcoming trips                                                                                                     | High     |
|                                                   | Users can give feedback on trips                                                                                                                    | Medium   |
|                                                   | There is a map feature enabled so that users can browse locations                                                                                   | Medium   |
| In App Communication                              | Users can chat, take audio/video calls with travel partners via the app                                                                             | High     |
| Community feature                                 | Users can post blogs, photos which is also integrated with social media platforms (Facebook, Instagram)                                             | Low      |
| Rating                                            | Users can rate their travel partners and destinations                                                                                               | Low      |

|                 |                                                                    |      |
|-----------------|--------------------------------------------------------------------|------|
| Users reporting | Users can report or block other users based on security reasons    | High |
| Admin Dashboard | There is a dashboard where admin users can monitor user activities | High |

## Design

For this project, I used a combination of modern mobile UI design patterns that support clarity and ease of use.

1. Onboarding and Authentication flow:
  - a. The app follows a simple, linear onboarding flow: landing page, sign in, sign up, verification. This pattern is very common in mobile apps, and it helps new user to get started.
2. Card-based layout:
  - a. Most content-heavy screens such as Home, Community uses card components. These cards make the information easy to scan, allow visual grouping, and showcase photos effectively.
3. Bottom Navigation Bar:
  - a. A five-tab bottom navigation bar is used to give quick access to the main features of the app/ This is one of the most familiar navigation patterns, so users don't have to learn anything new.
4. Chat Pattern:
  - a. The chat interface follows the standard messaging layout: chat list, sender/receiver bubbles, and text input field at the bottom. This was it's more natural and intuitive.
5. Form Input pattern:
  - a. Forms such as Sign up, create trip and feedback use labeled input fields, clear spacing, and button hierarchy. This is a conventional form structure that improves readability and reduces user mistakes.
6. Photo grid layout:
  - a. The community-photo screen uses a 2 column grid layout for images, which is like the gallery style used by apps like Instagram. It highlights visual content effectively.
7. View Trip:
  - a. Trip view screens use a large image at the top followed by detailed trip information and the itinerary. This creates a strong visual introduction and a clear hierarchy of content.
8. Dashboard Pattern:
  - a. The dashboard uses statistic cards, charts, and recent activity lists. This follows a typical analytics dashboard layout that makes information easy to digest immediately.

## Rationale for Design Choices

1. **Consistent Orange Gradient:** Almost all screens use an orange gradient at the top. This creates a strong sense of brand identity, adds warmth, and helps the app feel energetic and travel focused.
2. **Clean White Backgrounds:** Most pages keep a white background to maintain a clean and modern look. This also ensures that photos, icons, and text remain easy to read.
3. **Rounded Components:** Buttons, cards, and chat bubbles use rounded corners to create a friendly, approachable feel. It also aligns with current UI trends for mobile apps.
4. **Image-Focused Layout:** Since this is a travel-based app, visuals are extremely important. Large photos, hero banners, and gallery grids help users feel inspired and emotionally engaged.
5. **Consistent Icons and Spacing:** The app use a consistent set of icons and a uniform spacing/grid system. This improves familiarity, keeps the screens clean, and supports a smooth user experience.
6. **Community and Safety Focus:** Because the app is designed for women who want to travel and connect safely, features like verified profiles, trip groups, and direct messaging are emphasized in the layout. The visual design supports trust and comfort.

# User Based Prototype Evaluation

## Objectives of Prototype Evaluation

- Asses the overall usability of the app. How convenient potential users might feel in using the app.
- Determine whether the users will feel safe with the safety procedures planned to be implemented in the app.
- Identify any challenges the users might face while using the app.
- Understand any improvements or additional features users would like in the app.
- Evaluate whether the app supports proper decision making to plan a trip.
- Collect information on how users feel using the app compared to other travel apps.

We conducted a survey among the same set of users from whom we collected requirements for the app. We shared a form among our friends who are girls who like to travel.

## Data Visualisation and Analysis

### Convenience in navigating through the app

The majority of the survey participants which was 70% felt the app easy in using while the remaining 30% felt it was neutral. No one felt hard in using the app.

### Felt interesting in using the app

Majority of the participants felt the app was interesting while no one felt it bored.

### Clarity in buttons, texts and icons

Only 20% of the participants felt that the buttons, texts and icons were clear and easy to use. The majority of participants were not much happy with those. We resized the buttons, icons and texts to be more user friendly and we improved the colour contrast of those.

### Safety of the App

The participants were neutrally satisfied with the safety in using this app. Some suggested more improvements in the level safety like adding features to have the ability to contact SOS directly via the app. And one participant suggested to integrate artificial intelligence in order to receive alerts by detecting nearby safety conditions (eg: bad weather predictions)

### Willingness to use FemmeTrip in the future

All the participants stated that they would like to use the application.

### Insights from Results

- Most of the users shared positive feedback on the app. They were satisfied with the features of the app.
- Users felt the app was interesting and providing an engaging experience.
- User preferred to have more advanced security features to ensure safety during the trip.
- After analysing the results, we were able to find out that the app needed improvements in the sizes and colours in texts, icons and images.

- Overall, the survey results depicted that the app was providing a convenient and interesting user experience apart from few changes suggested by the survey participants.

### **Changes to the design based on Prototype Evaluation**

- Resized the fonts, buttons and icons to make the app look more interactive.
- Did some changes in the colours to improve contrast.
- Even though there was a suggestion to add more security features like SOS and AI support to detect nearby safety conditions, we were unable to fulfill it as it needs backend integration, GPS and AI support which is not possible to be done within the scope of the project.

## AI Use

| AI Tool Name                    | Version, Account Type | Specific features for which the AI tool was used                                                                                                          |
|---------------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| ChatGPT                         | GPT-5 Free Account    | To collect information on similar apps                                                                                                                    |
| ChatGPT                         | GPT-5 free Account    | Read provided personas and assist in creating mobile app features for a women-only safe travel companion app.                                             |
| ChatGPT                         | GPT-5 free Account    | Instructed to understand the personas without interpretation, then organize the listed features into structured and readable user requirements.           |
| ChatGPT                         | GPT-5 free Account    | Rewrite a list of research insights into a well-structured, numbered report format while keeping the original meaning and not adding any new information. |
| ChatGPT                         | GPT-5 free Account    | Generate images relevant to the app<br>Eg: Images of girls for profile pictures                                                                           |
| Grammarly- AI writing assistant | Free version          | Grammar correction, Improve overall readability.                                                                                                          |

### Value Addition

- While ChatGPT helped in gathering information, all the structuring content and decision making was done by us.
- AI always provides generic ideas, so we had to customise those to align with our application's goal.

# Appendix

## **User Study Survey (Requirements Gathering)**

1. What is your age group? \*
  - Under 18
  - 18–30
  - 30-50
  - 50-60
  - Above 60
  
2. What is your occupation status? \*
  - Student
  - Employed full-time
  - Employed part-time
  - Retired
  - Self-employed
  - Other:
  
3. How often do you travel? \*
  - Several times a month
  - Once a month
  - A few times a year
  - Once a year
  - Very rarely
  
4. With whom do you prefer most to travel? \*
  - Alone
  - With family
  - With friends of the same age group
  - With friends in any age
  - With organized travel groups
  
5. What type of travel experience do you prefer most? \*
  - Relaxation
  - Exploration
  - Adventure
  - Pilgrims

- Nature-focused travel

6. Which type of destinations do you most enjoy visiting? \*

- Mountains
- Beaches
- Religious Sites
- Historical Landmarks
- Natural Resources
- Other:

7. When travelling with new or unknown people, how concerned are you about your personal safety? \*

- Not concerned at all
- Slightly concerned
- Moderately concerned
- Very concerned
- Extremely concerned

8. What are your main safety concerns when travelling with strangers? \*

- Privacy of personal information leakage
- Risk of harassment
- Theft or loss of belongings
- Health or medical emergencies
- Other:

9. Which communication method do you prefer when interacting with travel partners? \*

- Text messaging
- Voice calls
- Video calls
- In-person meetups before the trip
- Other:

10. What type of travel information do you find most helpful when planning a trip? \*

- Photos of destinations
- Reviews and ratings
- Travel Guides
- Cost estimates
- Health/safety information
- Accessibility information (for elderly or disabled travellers)
- Other:

11. Do you have any health conditions or mobility issues that affect your travel plans? \*

12. What challenges do you face when travelling or finding travel partners? \*

## **User Study Survey (Prototype Evaluation)**

1. How easy was it to navigate through the app? \*
  - Easy
  - Neutral
  - Somewhat Difficult
  - Very Difficult
  
2. How interesting did you find using the prototype? \*
  - Very Interesting
  - Somewhat interesting
  - Neutral
  - Uninteresting
  - Very uninteresting
  
3. How clear were the texts, buttons and icons? \*
  - Very Clear
  - Clear
  - Neutral
  - Unclear
  - Very Unclear
  
4. How safe did you feel the app was? \*
  - Very Safe
  - Safe
  - Neutral
  - Slightly Unsafe
  - Unsafe
  
5. How satisfied are you with the overall prototype? \*
  - Very Satisfied
  - Satisfied
  - Neutral
  - Unsatisfied
  - Very Unsatisfied
  
6. Will you use this app to plan your trips\*
  - Yes
  - No
  
7. Which feature of the app did you like the most?
8. Do you have any suggestions to improve the app?

## AI Prompts

# AI

Cathy

- 65
- Need walking support
- Limited experience with smartphones and apps
- Loves visiting religious places

1. She has developed an interest in visiting religious places as she is staying alone at home after her retirement.
2. She likes to find travel companions who can accompany her and help her as she is having difficulties in walking.
3. She is confident in using voice calls rather than messaging or having video calls as she is not much familiar with using smart phones.
4. She is very concern about her safety when travelling with unknown people. She doubts whether sharing her personal information is a risk.
5. When planning trips, she rely on recommendations and photos from others.

generate a photo for this persona

To create an accurate and natural-looking image for Cathy, could you please confirm a few quick details first?

1. What **style** would you like the image in — e.g.:

- 📷 Realistic photo
- 🎨 Illustrated / cartoon-style
- 📄 Persona card (with text + photo combined)

2. How would you like Cathy to appear? For example:

- Elderly woman, around 65, casual travel clothes, possibly with a walking stick, calm and friendly expression.
- Indoors (home) or outdoors (e.g., near a temple, travel scene)?

Once you confirm those details, I'll generate the image exactly as you need.

Realistic photo

Andrea

- 25 years old
- Travels very often
- Hiker

- Andrea is an energetic young traveller who's hobby is hiking
- She goes on hikes very often and loves to make new friends.
- Interested on travelling in groups of same age group who are adventurous and fun, as she loves having fun on her way.
- She likes exploring nature mostly mountainous places.
- As she is having a very busy lifestyle she find messaging more convenient than having calls to communicate.
- Prefer getting ideas on the places before visiting via photos. Therefore she likes features like photo sharing.
